

# Need a Medication Safety Checkup™?

Need answers fast? In addition to its comprehensive multi-day risk assessments, the Institute for Safe Medication Practices (ISMP) also offers a one day customized risk assessment that can help your organization quickly address specific medication safety challenges. It's cost effective. It's time effective. And you get input from some of the nation's leading safety experts.

Have an ISMP Medication Safety Checkup™ and focus in on some of your key safety questions. Just one day can make a huge impact.

## Q: Why ISMP?

**A:** ISMP has more than 35 years of experience, as well as operation of the nation's only voluntary medication error reporting program, and can offer solutions based on unique, in-depth knowledge of medication errors and their causes. ISMP has assisted hundreds of healthcare organizations around the country, and can provide facilities of all sizes and settings with evidence-based prevention strategies and best practices.

## Q: What Is Included?

**A:** Individualized ISMP analysis and support to address virtually any medication safety question or problem. Whether you are looking for new ideas to improve safety in specific practice areas or clinical locations, tackling a difficult new safety issue, or want to know how to better analyze and use your existing error reporting data, ISMP can help.

## Q: How Long Does It Take?

**A:** One day onsite – an efficient use of your time for maximum results. ISMP experts will spend a day at your practice location and work collaboratively with your staff to problem solve and provide the impetus to transform your medication safety practices.
